Biological Design, MS

ESBDEMS

Learn to seamlessly traverse the spectrum between technology and biology in order to solve current and future challenges relating to energy, environment, human health, sustainability and security. You will work on use-inspired projects and research with world-class faculty and peers.

Program Description

Degree Awarded: MS Biological Design
Students pursuing the MS degree in biological design are trained in the continuum between technology and biology by participating in a flexible training program that requires students to take one program core course (Principles of Biological Design), one course from a suite of biotechnology courses, and one from a suite of statistics courses. The flexibility of this program, while maintaining key instructional structure, allows students from both traditional and non-traditional engineering backgrounds to have access to training and mentoring simultaneously in both engineering and technology with a biological focus. This allows students from diverse backgrounds to have access to transdisciplinary education and training that they would not have in traditional program settings.

As part of coursework and applied projects or theses, students read literature; identify critical problems related to energy, environment, human health, sustainability and security; and develop solutions to these problems using a synergy of technological and biological solutions, either in teams (course projects) or individually (thesis or applied project). Students are mentored by faculty from different colleges and schools at ASU.

At a Glance

- **College/School:** [Ira A. Fulton Schools of Engineering](#)
- **Location:** [Tempe campus](#)
Degree Requirements

30 credit hours and a thesis, or
30 credit hours including the required applied project course (BDE 593)

Required Core (3 credit hours)
BDE 502 Biological Design II (3)

Statistics (3 credit hours)
CHE 598 Topic: Six Sigma Methodology/Engineering Experimentation (3)
IEE 572 Design Engineering Experiments (3)
IEE 578 Regression Analysis (3)
IEE 670 Mathematical Statistics (3)

Biotechnology (3 credit hours)
BME 598 Topic: Bioenergy and Microbial Biotechnology (3)
BME 598 Topic: Cellular and System Modeling (3)
BME 598 Topic: Chimeras and Recombinant Organisms in Medicine (3)
CEE 565 Advanced Environmental Biotechnology (3)
CEE 567 Environmental Microbiology (3)
CEE 598 Topic: Bio-inspired Design (3)
CHE 579 Microbial Bioprocess Engineering (3)
CHE 598 Topic: Nanobiotechnology (3)
CHE 598 Topic: Synthetic Biology and Metabolic Engineering (3)

Electives or Research (12 or 15 credit hours)

Other Requirements (3 credit hours)
BDE 598 Topic: Biological Design Seminar (3)

Culminating Experience (3 or 6 credit hours)
BDE 593 Applied Project (3)
BDE 599 Thesis (6)

Additional Curriculum Information
BDE 591 Topic: Biological Design Seminar is a one credit hour course to be taken in three semesters. This course may be substituted with the academic unit's approval.

Students select electives in consultation with their advisor. Students completing the applied project for the culminating experience must complete 15 credit hours of electives, and students completing the thesis option take 12 credit hours of electives.

Students must complete three credit hours for each requirement in statistics and in biotechnology from the courses listed. If approved by the academic unit, courses may be substituted with an appropriate alternative.
Coursework selected as part of the statistics or biotechnology requirements may not be used as elective coursework on the same plan of study. Students should check with their academic advisor to ensure that the total credit hours of their plan of study are equal to 30.

**Admission Requirements**

Applicants must fulfill the requirements of both the Graduate College and the Ira A. Fulton Schools of Engineering. Applicants are eligible to apply to the program if they have earned a bachelor's or master's degree in a related field, including physical sciences, biological sciences, and engineering from a regionally accredited institution.

Applicants must have a minimum cumulative GPA of 3.00 (scale is 4.00 = "A") in the last 60 hours of their first bachelor's degree program, or applicants must have a minimum cumulative GPA of 3.00 (scale is 4.00 = "A") in an applicable master's degree program.

All applicants must submit:

1. graduate admission application and application fee
2. official transcripts
3. three letters of recommendation
4. personal statement
5. proof of English proficiency

**Additional Application Information**

An applicant whose native language is not English must provide proof of English proficiency regardless of current residency. Applicants whose native language is not English are required to achieve a minimum score of 90 on the TOEFL iBT.

The application process is very competitive and candidates are strongly encouraged to adhere to all priority deadlines.

**Career Opportunities**

The master of science program in biological design trains a new type of student at this very interface, with cutting-edge skills at the continuum spanning technology and biology. It is anticipated that graduates will find placement in the broader biotechnology industry including biopharmaceutical processing, biomanufacturing, sustainable biotechnology, and food and agribusiness industries. Some graduates will likely pursue careers in entrepreneurship (e.g. start-up companies), law (e.g. patent law), regulatory affairs and medicine.

Career examples include:

- clinical laboratory technologists
• environmental engineers
• environmental scientists and specialists
• epidemiologists
• health and safety engineers
• microbiologists
